

Instructions for Windows Xp, Vista, Windows 7 or 8:

Upgrading your Windows with Rx and Orders Writer 5.0:

Before upgrading to Version 5.0, you must already be using the Version 4.0 or 4.9 of our program and it must be properly installed in your Windows.

Please choose between the 2 options and click it:

1. If you are already using Rx and Orders Writer (Dr. Eyes) Version **4.9**, do the following, [click here for the instructions](#)
2. If you are still using Rx and Orders Writer Version **4.0**, you need to upgrade to version 4.9 first before you can upgrade to 5.0, [click here for the instructions](#)

If you are already using Rx and Orders Writer (Dr. Eyes) Version 4.9, do the following:

- a. Open the Zip file EasyClinicSoftware5.0 (extract it)
- b. Open **RxOrdersWriter5.0**,
- c. Open the green installer, **RxOrdersWriter5.0_upgrade**,
- d. Click **No Questions Ask installation** then proceed with installation.
- e. Once done, you may re-open Dr.Eyes icon at the desktop and it is expected that you are now upgraded to Version 5.0
 - a. Of course you need to read the PDF Manual titled **How to Use the New Features of Rx and Orders Writer 5.0 in Windows**.
- f. The said manual is part of the 5.0 zip file or you may download it at the Knowledgebase section of www.easyclinicsoftware.com.

Note: The reason that it's easier to upgrade from 4.9 to 5.0 is because the RxWriter5 folder is already located in Local Disc C (while in Version 4.0, only the RxWriter4 folder was just given). If however you are an advanced user and you transferred RxWriter5 from Local Disc C to another location (like Dropbox folder), doing the simple installation above will not be enough because the new files are programmed to fall to RxWriter5 folder in Local Disc C. So if you indeed transferred the said folder, just do a manual upgrade by doing the following: (if you did not, just disregard the following)

Manual Upgrade:

- b. Open the Zip file **EasyClinicSoftware5.0**
- c. Open the RxOrdersWriter5, open **RxWriter_Manual_Upgrade5.0**.
- d. Copy all the files inside it.
- e. Go to where you transferred RxWriter5 folder and open it and paste it there, answer yes to overwrite. Don't worry this will not delete your records
- f. Then you may re-open Dr.Eyes icon and it is expected that you are now upgraded to Version 5.
- g. Then read the PDF Manual titled **How to Use the New Features of Rx and Orders Writer 5.0 in Windows**.

If you are still using Rx and Orders Writer Version 4.0, you need to upgrade to version 4.9 first before you can upgrade to 5.0:

Download the Rx and Orders Writer Version 4.9. Please email easyclinicsoftware@yahoo.com for a request and we will give you that link.

- a. Install Version 4.9 based on the PDF manual it contains in the zip file. Once you have successfully installed version 4.9, install version 5.0 based on the explanation above. (**If you are already using Rx and Orders Writer (Dr. Eyes) Version 4.9, do the following :**)
- b. Once done you will notice that your old drug list are not yet available, this is what you will do to import it...
- c. Go to local disc C , open RxWriter4 folder, select and copy the files **rmRxPopup** and **rmOrdersPopup** (the ones without HDF).
- d. Go to local disc C, open RxWriter5 folder and paste the 2 files there, answer yes to overwrite.
- e. If you have already upgraded your Patient Files to version, you may also import the Patient names you have from Patient Files to Dr.Eyes. By doing the following...
- f. Go to local disc C, open MyPatients5 folder, look for rmPatientFies and copy it (note the one without HDF).
- g. Go to local disc C, open RxWriter5 folder and paste the file there, answer yes to overwrite.
